PROVED SIRE LIST
1961

AYRSHIRE, GUERNSEY, JERSEY, BROWN SWISS,
MILKING SHORTHORN, AND RED DANE SIREs

Agricultural Research Service
U. S. Department of Agriculture

DHIA PROVED-SIRE LIST

This DHIA Proved-Sire List contains proved-sire record summary information for 498 Ayrshire, 684 Guernsey, 602 Jersey, 689 Brown Swiss, 206 Milking Shorthorn, and 5 Red Dane sires. It also contains daughter-average records for 307 Ayrshire, 1,046 Guernsey, 1,539 Jersey, 324 Brown Swiss, 169 Milking Shorthorn, and 8 Red Dane sires. These summaries are compiled from data received in the Dairy Cattle Research Branch, AHRD, ARS, up to May 1, 1961.

All production records used in proved-sire records consist of 305-day lactation records standardized to a mature-equivalent twice-a-day milking basis. When more than one lactation record is available for a cow, each record is standardized and the average of all standardized records is used to represent the producing capacity of the cow.

Compilations of contemporary (herd-mate) and yearly herd-average data are dependent on herd codes to assemble such data for each sire. Because a uniform system of identifying DHIA herds by code has been in operation only a few years, lactation records and herd-average data reported in earlier years are not identified by herd codes. Proved-sire records for the older sires listed, therefore, may include little or no contemporary and yearly herd-average data.

A proved-sire record is tabulated for a sire when 5 or more of his daughters have lactation records reported, together with lactation records for their dams. A proved-sire record is retabulated (reproved) when 50 percent additional dam-daughter comparisons are reported.

EXPLANATION OF LISTED SIRE RECORD SUMMARIES

Summary data for the Ayrshire sire 58825, Penshurst Brisk Man, listed on page 6, are as follows:

```

58825    PENSHURST BRISK MAN.....
05-C8-38    43060    185281    79 NCN-AB DAU    292 10536 4.0 426 102    10 9778 401    2 9407 387
LISTED,07-60    44 PAIRED NCN-AB DAU    138 10901 4.1 444 102
STATES-12,13,14,16,21,23,33, DIFF.    44 PAIRS 0023-0011-0020    51 .1- 15-    13 919 23    13 1398 38
42,50,51
  
```

To explain the sire summary above: Line 1 lists the registration number and name of the sire. Beginning at the left, line 2 lists the birth date of the sire; the registration number of his sire; and the registration number of his dam. (Sire name and birth date, and registration number of sire and dam of proved-sire are not available for first provings -- To illustrate: See Sire No. 98624 on p. 21.) Pedigree information for each proved sire is obtained from the Breed Registry organization after the sire is proved the first time. This pedigree information is then included in the sire summary when the sire is reproved.

"Listed 07-60" (line 3) indicates that the sire has been previously proved and his last proof summary was listed in the July 1960 DHIA Proved-Sire List.

"States 12, 13, 14, 16, 21, 23, 33, 42, 50, 51" (lines 4 and 5) indicates the sire was proved with data from 10 States coded 12, 13, etc. A list of State codes is given on page 4.

This proved-sire tabulation includes the records of 79 non-AB daughters of the sire, with a total of 292 lactation records. Usable lactation records were reported for dams of 44 of the 79 non-AB daughters. Comparing the production records of the daughters with the production records of their dams showed, "44 pairs 0023-0011-0020," which means 23 of the 44 daughters excelled their dams in milk production, 11 excelled in percent butterfat test, and 20 excelled in butterfat production. The 44 daughters collectively had a total of 138 lactation records that when averaged showed 10,901 pounds of milk testing 4.1 percent butterfat of 444 pounds of butterfat. On the average, the daughters excelled their dams in milk production by 51 pounds, were excelled by their dams in test by 0.1 percent, and in butterfat production by 15 pounds.

Data at the right give the production level of the contemporaries or herd-mates of the daughters -- also the yearly herd-average of the herd in which the record was made.

In this sire record, contemporary or herd-mate comparison data were available for 13 of the daughters. On the average each daughter had 10 herd mates. The average production of the herd-mates was 9,778 pounds of milk and 401 pounds of butterfat. On the average the 13 daughters excelled their contemporaries or herd-mates by 919 pounds of milk and 23 pounds of butterfat. The herd-average data are based on the yearly herd averages available that were made concurrently with the lactation records. Yearly herd averages have been increased by 9 percent that they may be more comparable to the standardized lactation-average data included in the summary.

The proved-sire record summary for the Ayrshire sire 63144, Vista Grande El Chico, also listed on page 6, is as follows:

```

63144    VISTA GRANDE EL CHICO.....
11-29-39    55678    148607    51 AB DAUGHTERS    121 8591 4.2 361 148    11 9399 384    2 9097 377
LISTED,07-60 AB STUD,14- 01    34 PAIRED AB DAU    78 8497 4.2 355 148
STATES-11,12,13,14,16,21,23, DIFF.    34 PAIRS 0013-0022-0014    758- .2 14-    17 987- 32-    16 704- 25-
31,34,41    26 NON-AB DAU    63 8916 4.3 380
3 PAIRED NCN-AB DAU    5 8558 4.0 345

```

The above summary includes data for both AB and non-AB progeny. At the left, in addition to the data explained in the record for sire No. 58825, the AB stud in which the sire was located is indicated as "AB Stud 14-01." The "14" indicates the State and the "01" indicates the stud within the State. On pages 3 and 4 are listed the AB studs by State with their respective code numbers.

This sire had 51 AB progeny reported with records, 34 of which also had dams reported with records. The explanation of the daughters' production data, the paired records, and also the contemporary and yearly herd data is similar to that given for the record of sire No. 58825.

When sufficient data have not been reported to warrant a dam-and-daughter proof for a sire, a daughter-average record is compiled. The summary record for sire No. 52299, page 5, is an example. The explanation of the contemporary and herd-average comparisons are also similar to that given for the record of sire No. 58825.

If a sire has been previously proved and sufficient additional dam-and-daughter comparisons (50 percent or more) have not been reported to warrant retabulating the record or reproving the sire and there are 50 percent more daughters reported with records than were included in the previous daughter-average or proved-sire record, a new daughter-average record is compiled.

Using the Sire Summary Data

Proved-sire and daughter-average records as summarized in this list should be considered merely as an indication and not as conclusive evidence of the breeding value of the sire in question. In general, however, the greater the number of dam-and-daughter comparisons; daughter-contemporary comparisons; and daughter-herd-average comparisons included in the summary, the more reliable the record as an indication of the breeding value of the sire.

If a proved-sire or daughter-average summary of non-AB progeny consists of less than 10 comparisons and of AB progeny consists of less than 25 comparisons, the respective summary should be considered as a preliminary summary. Additional comparisons may significantly change the sire summary.

To make the most intelligent selection of a sire, the dairyman should use these sire summary records to single out the most promising sires and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made. It is especially important to determine that there has been no selection of daughters in making the comparisons of sires.

ARTIFICIAL-BREEDING ORGANIZATIONS IN THE UNITED STATES

DHIA Proved-Sire Records, of sires in AB service, indicate by code number the last AB organization in which a sire is used. Following is a complete list of AB organizations that have operated in the United States (according to reports received in the Dairy Cattle Research Branch). Some no longer exist, but sires used in such organizations may be proved or reproved, in which case reference will be made to the organization in the proved-sire record.
